MODERNO

CARBON INFRARED OUTDOOR HEATER

MODERNO CARBON INFRARED OUTDOOR HEATER

Moderno carbon infrared heaters generate heat only when required, allowing you to enjoy immediate warmth and comfort. They are up to 80% more efficient compared to traditional heating systems, thus reducing your running costs dramatically. There is no longer the need to pre-heat the air or risk the escape of warmed air. Suitable for outdoor or indoor usage, these heaters are compact in design, look great wall mounted or ceiling mounted and can accomodate all heating spaces.

Ideal Usage

These heaters are ideally suited for Alfresco dining and outside areas at cafes, restaurants and bars. In homes and work places, where doors are frequently opened and closed, these heaters provide immediate directional heat. They function well in areas of high heat loss and perform exceptionally well in buildings with elevated ceilings, e.g. schools, churches and community centres.

Features:

- Can be mounted horizontal or vertical.
- Do not burn oxygen, creating an extremely efficient directional heat.
- They do not require the refilling of gas bottles, which can run out at inconvenient times.
- Odour and CO2 emission free.
- Not affected by wind or air movements.
- 80% more economical than traditional heating systems.
- Periscopic remote control - can be controlled from a long distance and wide course.
- Automatic temperature control regulates power consumption based on your set temperature and eliminates annoying hot and cold cycles.
